WE FOCUS ON STABLE HIGH QUALITY

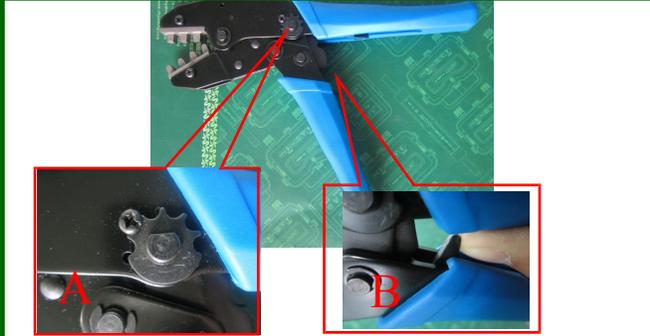

PV-JM601 Connector Installation Instruction

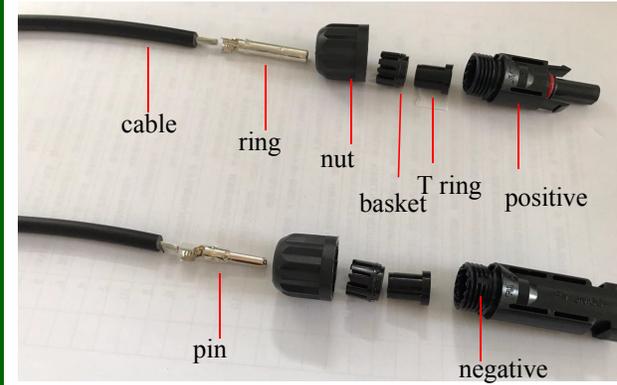

Step 1: tools required (see step 2 for the use method of the terminal clamp).

Step 2: (1) Adjustment of riveting pressure: loosen the screw on the pressure ring with a crosshead screwdriver and rotate the adjusting plate (counterclockwise rotation can increase the pressure, otherwise the pressure will decrease). See picture A.
 (2) If you want to loosen the terminal clamp when riveting work is half finished, just push the stop block up by hand. See picture B.

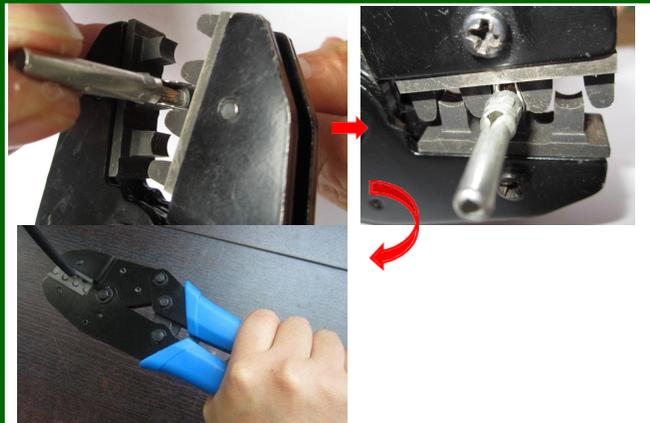

Step 3 : parts description

Step 4 : cut the cable before installing the connector (strip 9mm).

Step 5: use the terminal clamp to rivet the pin and the socket.

Step 6: riveting is completed.

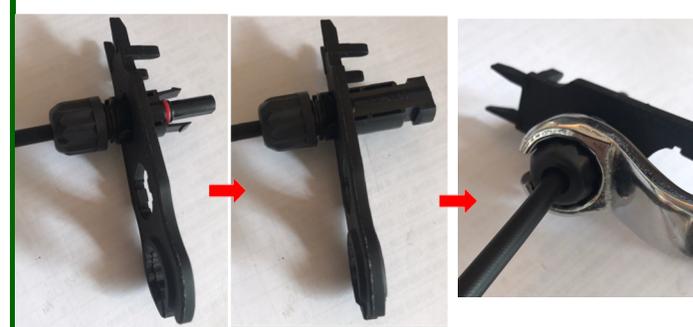

Step 7: assemble the connector.

Step 8: assemble the cable and the connector (there will be a sound of click when the installation is in place).

Step 9: use the wrench to adjust the clearance of the nut .

Step 10: adjust the clearance of the nut to 0.2 - 0.8 mm.

Step 11: when the positive and the negative should be separated after insertion, please use the fixtures.

Remarks:

1. Do not insert the positive to the negative or separate them in the case of electric charge;
2. Lubricants are not recommended when installing the connector.
