

BISOL EasyMount™ Home HOOK

Simple, rigid & safe structure for most types of tiled roofs

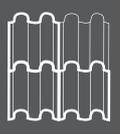

Technical Specifications

Application	Any type of tiled roof (except for barrel tiles)
Roof incline	From 10°
Method of installation	Attached to rafters
Module orientation	Portrait or landscape
Module frame tolerances	Suitable for all framed module dimensions with appropriate clamp height
Maximum load on hook	BISOL EasyMount™ Home HOOK: 130 kg (286 lbs) for aluminum hook 100 kg (220 lbs) for steel hook
Snow and wind load per system	0 – 5.40 kN/m ² (with BISOL PV modules)* 0 – 150+ km/h (93+ mph)
Material	Hook: Stainless steel 1.4301 or Aluminum EN-AW 6063 T66 Aluminum EN-AW 6063 T66 (Profile 48) Stainless steel A2-70 (fastening elements)
Height adjustability	Aluminum hook: Bottom height: 50 – 70 mm Top height: 77 – 108 mm + Bottom height Stainless steel hook: Bottom height: 45 – 65 mm Top height: 165 – 185 mm + Bottom height

* Please discuss higher snow loads with technical support.

Fits most roof tiles

Exceptional load carrying capacity

Multiple-point adjustability

Versatile installation options

High-grade non-corrosive materials

Project and design tools available

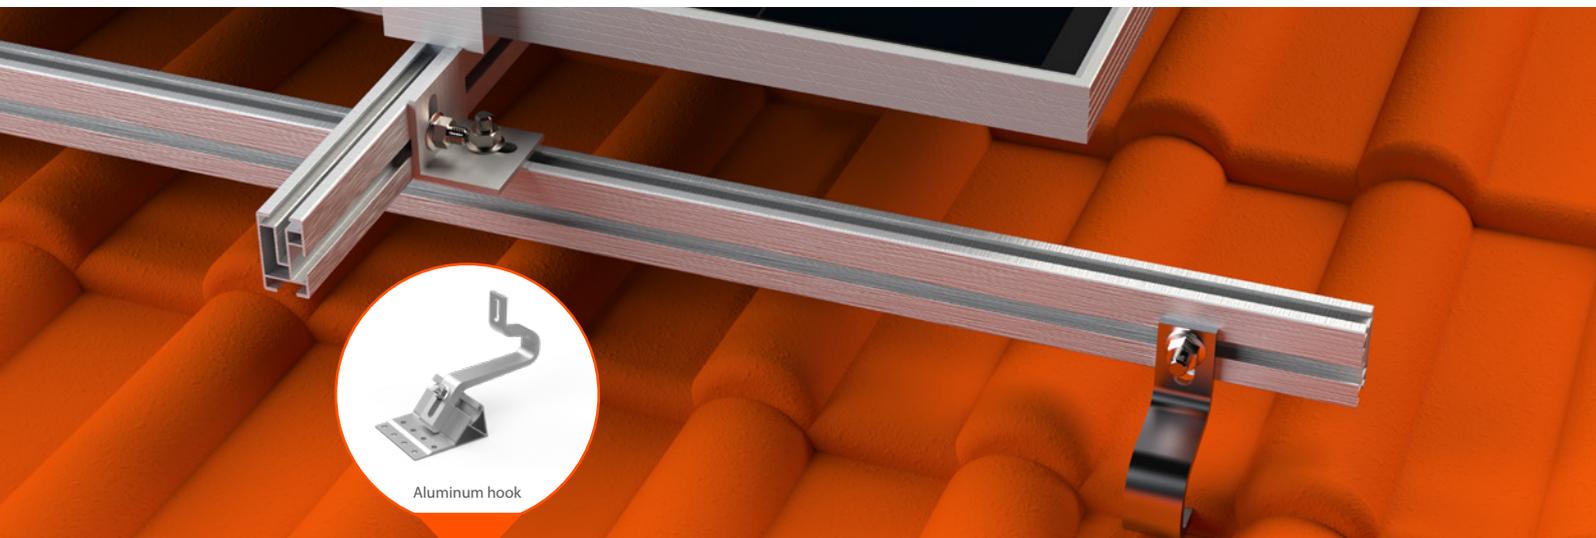

10-year product guarantee

Fun facts about BISOL EasyMount™ Home HOOK

It is common for tiles to crack under the hook when high snow loads are present, but with our Home HOOK, both from aluminum and stainless steel, you have this covered.

Aluminum hook

Compared to the other products on the market, it is possible to save costs by using fewer aluminum hooks. If your roof allows it, you can use 45% less aluminum hooks per standard 120 cells PV module (based on standard load bearing capacity (70 kg) of tiled hooks).

With the standard application of 2.5 aluminum hooks per standard 120 celled PV module, we guarantee to bear at least 0.66 meters of snow (calculation for newly fallen wet snow with density of 200 kg/m³). Snow loads higher than 0.66 meters shall be discussed with technical support.
